Hyperflute

Hyperflute's performance in the most demanding conditions is a valuable asset. The chemical treatment of the fibres during the production process gives Hyperflute exceptional strength, even in extreme environments such as deep freeze or high humidity. It's tough enough to replace more expensive semi-chemical fluting and has the added benefit that it runs faster on the corrugator. And, naturally, coming from St Regis, Hyperflute is 100% recycled and recyclable. For secure, UK based supply of a fluting that will never let you down, choose Hyperflute.
